

Interaction Modeling Uncertainties at MINERvA

Friday, November 2, 2018 5:00 PM (25 minutes)

MINERvA began its cross section measurement program with a default model that looks very different than the used in its most recent measurement. I summarize the improvements and the measurements that have driven those changes. Recent data highlights areas in need of future refinement. I also discuss how the results of these improvements may be utilized by other experiments for their modeling.
