Production of quarkonia and heavy flavour states in ATLAS

Tuesday, 7 May 2019 17:30 (15 minutes)

Associated production of vector boson with quarkonia is a key observable for understanding the quarkonium production mechanisms, including the separation of single and double parton scattering components. This talk will present the latest differential measurements from ATLAS of associated-quarkonium production. In addition, recent results on heavy flavour production measurements are reported in the Bu and Bc systems.
